

Origami Flower

1. Start with a square piece of paper, white side up. Fold the paper left to right, unfold. Repeat by folding top to bottom, unfold. This gives a "+" crease mark.

2. Turn the paper over to the colored side. Fold the paper on the diagonal, corner to corner; unfold. Repeat by folding corner to corner along the other diagonal; unfold. This gives an "X" crease mark.

3. Collapse the paper into a waterbomb base. To do this, bring the top of the paper down towards the bottom while pushing the sides inwards.

4. This will naturally fold into triangle with two flaps on the left and two flaps on the right.

5. Rotate the model so that the base of the triangle is up and the apex is down. Fold the two flaps on the left towards the right side. All 4 flaps should be stacked as shown on 5a.

6. Fold two layers back to the left side, but fold at an angle along crease A to B as shown.

Origami Flower

7. This is how the model should look like. Note: fold as accurately as possible to keep A as a sharp point. Turn the model over as shown in 7a.

8. Repeat on the remaining two flaps: fold along the dashed lines.

9. The 4 flaps are again overlapping but there is a nib. The nib (labeled "S") will be the stem of the flower. "C" will be the center of the flower.

Hold the nib and rotate the model so that you look at C directly.

9. Separate the 4 flaps evenly as shown above in step 10. Use your fingers and pry open the flap layers so they look like 10a. If necessary, bend back the petal a little so it keeps its shape

FINISHED FLOWER!
